

CAN Transceiver

PRELIMINARY

FEATURES

- Pin Compatible with PCA82C250 and DeviceNet, SDS, ISO11898 Compatible
- High Speed, up to 1Mbps
- Differential Transmit to the Bus and Receive from the Bus to the CAN Controller
- At Least 110 Nodes Can Be Connected
- 100V Transient Protection on the Transmit Output
- 24V Supply Cross Wire Protection on CANH and CANL
- No Bus Loading When Powered Down
- Operates over -40°C to $+125^{\circ}\text{C}$
- Unitrode DeviceNet ID#107

DESCRIPTION

The UC5350 Control Area Network Transceiver is designed for industrial applications employing the CAN serial communications physical layer per ISO 11898 standard. The device is a high speed transceiver designed for use up to 1Mbps. Especially designed for hostile environments, this device features cross wire, loss of ground, over voltage, and over temperature protections well as a wide common mode range.

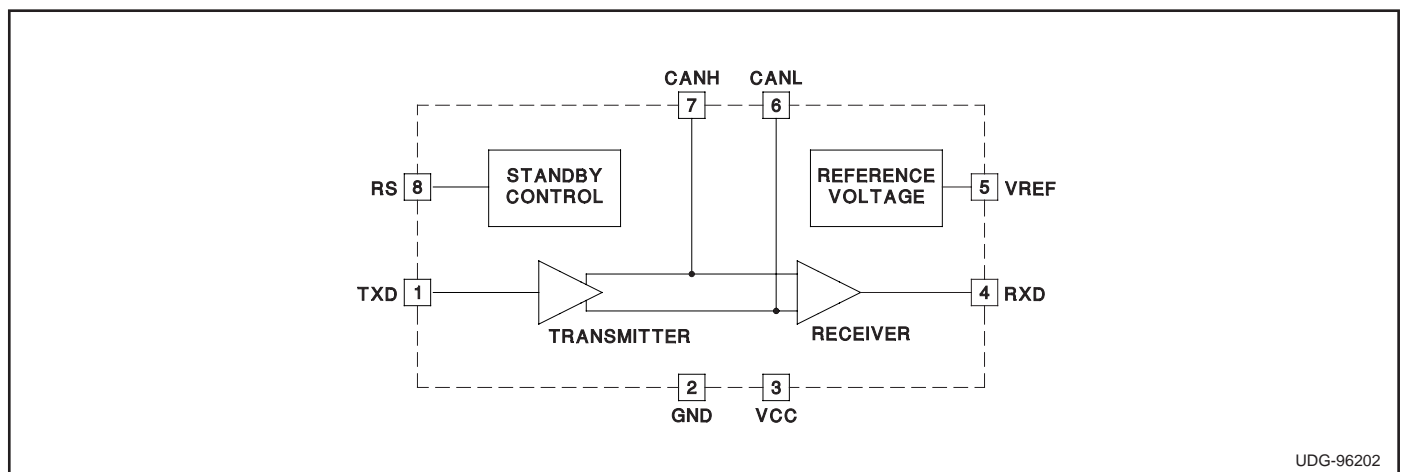

The transceiver interfaces the single ended CAN controller with the differential CAN bus found in industrial and automotive applications. It operates over the -7V to $+12\text{V}$ common mode range of the bus and will withstand common mode transients of -25V to $+18\text{V}$ as well as Schaffner tests. Performance features include high differential input impedance, a symmetrical differential signal driver and very low propagation delay that improves bus bandwidth and length by reducing reflection and distortion.

The transceiver operates over a wide temperature range, -40°C to $+125^{\circ}\text{C}$ and is available in 8-pin SOIC and Dual-in-Line packages.
